CONTROL TOWER
ESG & Finance Platform

ESG Control Tower

Portfolio Mockup

Sustainability Reporting · Controlling · Audit Readiness

Built to demonstrate how a controller should think about ESG data — not just displaying numbers, but making them auditable and defensible.

CSRD | GRI 302 | EU Taxonomy | TCFD | ISO 14001

The Challenge

Why most ESG dashboards are not enough

Insight

> **A dashboard that looks good isn't enough.**
>
> A controller needs to be able to trust the numbers behind it.
>
> CORE PRINCIPLE

01

Data Origin Unknown

Is this number from the ERP, an IoT sensor, or someone's spreadsheet? Without source tagging, you can't know.

02

Variances Unexplained

A 14% budget overrun is visible on a chart — but was it approved? Is there a business reason? Context is missing.

03

No Audit Trail

When the auditor asks who changed a figure and why, "I think it was correct" is not an answer.

The answer: build trust into the data layer, not just the presentation.

Every number in this Control Tower is traceable, comparable, and sign-off ready.

Dashboard Overview

Top-level KPIs and ESG progress at a glance

View 1/3

KEY PERFORMANCE INDICATORS · FY 2024 Q4

CO2 EMISSIONS	ENERGY USE	WASTE DIVERTED	COMPLIANCE
12.4 ktCO2e	84.2 GWh	71 %	94 / 100
-8.3% vs target	+2.1% vs Q3	+3pp vs Q3	+6 pts vs Q3

ESG TARGET PROGRESS · 2030 BASELINE COMMITMENTS

Scope 1 Emissions Reduction	Target 100% by 2030	67%
Renewable Energy Share	Target 75% by 2026	58%
Waste Diversion Rate	Target 80% by 2025	71%
Water Use Reduction	Target 90% by 2027	82%
Supply Chain Audits	Target 100% annually	91%

COMPLIANCE STATUS · REGULATORY FRAMEWORKS

CSRD — Annual Report	In Review
TCFD Disclosure	Complete
GRI Standards Report	In Progress
EU Taxonomy Alignment	Needs Action
Carbon Offsetting Cert.	Overdue

Energy Audit Drill-Down

Source verification · Variance alerts · Change log

Data Trust Score

86%

3 of 22 readings require review before this number can be signed off

86% VERIFIED

SITE-LEVEL VERIFICATION TABLE

SITE	GWH Q4	SOURCE	VS BUDGET	VS PY	STATUS
Stockholm HQ	18.4	IoT	-1.2%	-5.1%	Complete
Gothenburg Plant	31.7	ERP	+8.4%	+3.2%	Review
Malmo Warehouse	12.1	Invoice	+0.8%	-6.7%	Complete
Oslo Office	8.6	Manual	+14.2%	+5.8%	Overdue
Copenhagen DC	9.3	IoT	-3.1%	-8.2%	Complete
Helsinki Lab	4.1	ERP	+1.9%	-2.1%	Complete

SOURCE TAG LEGEND

- **IoT** — Automated sensor feed — highest reliability
- **ERP** — System export — verified against sub-ledger
- **Invoice** — Utility bill match — complete audit paper trail
- **Manual** — Human entry — flagged for additional review

Audit Trail & Reconciliation

Who touched the data · when · and why

CHANGE LOG — OSLO OFFICE (FLAGGED SITE)

Flagged: invoice missing + over budget
System · Dec 09, 08:00
Auto-alert: deviation >5% + invoice outstanding

Manual estimate entered
Lars Hansen · Dec 05, 11:20
8.6 GWh estimated from Q3 actuals + headcount adj.

Reminder sent: invoice outstanding
System · Dec 04, 09:00
Contacted Fjordkraft billing — awaiting Nov bill

Q3 data entered manually
Lars Hansen · Oct 12, 15:44
Historical pattern — invoices arrive late

RECONCILIATION — Q4 TOTAL ENERGY

ERP SYSTEM T	INVOICE / UT	DIFFERENCE
84.8 GWh	**84.2** GWh	**0.6** GWh
SAP export · Dec 10, 0	5 of 6 sites invoiced	Oslo invoice pending

SITE RECONCILIATION STATUS

Stockholm HQ	Matched
Gothenburg	0.3 GWh gap
Malmo Whs.	Matched
Oslo Office	Invoice missing
Copenhagen DC	Matched
Helsinki Lab	Matched

Oslo +14.2% vs Budget — Action Required
Manual estimate · invoice outstanding
Cannot be signed off until reconciled

Why This Matters

Regulatory context: CSRD · GRI · EU Taxonomy

Sustainability reporting is moving from voluntary to legally mandated.

Under CSRD, companies must disclose ESG data with the same rigour as financial statements.

CSRD

Corporate Sustainability Reporting Directive

Mandatory for ~50,000 EU companies from 2025. Requires double materiality assessment and third-party assurance. Data must be auditable.

GRI 302

Energy — Global Reporting Initiative

Requires disclosure of energy consumption by source, reductions achieved, and the methodology used. Every number needs a denominator.

EU Taxonomy

Sustainable Finance Classification

Requires companies to demonstrate what proportion of revenue / capex / opex qualifies as environmentally sustainable. Audit trail essential.

TCFD

Task Force on Climate-related Disclosures

Scenario-based climate risk reporting. Controllers must model multiple trajectories and defend the assumptions behind each forecast.

The controller's role has changed.

ESG data quality is no longer a sustainability team problem — it is a finance and control problem.
The skills required: source verification, variance analysis, reconciliation, sign-off workflows.
This Control Tower demonstrates exactly that thinking, applied to real reporting frameworks.

CONTROL TOWER
ESG & Finance Platform

Let's talk about trusted ESG data.

I am looking for roles in controlling and sustainability reporting where I can apply structured thinking to ESG data quality, reporting frameworks, and financial close processes.

AREAS OF EXPERTISE

- **Sustainability Reporting**
  CSRD · GRI · TCFD · EU Taxonomy
- **Financial Controlling**
  Budget vs actual · Variance analysis
- **Data Quality**
  Source tracing · Reconciliation · Audit trail
- **Scenario Planning**
  Forecast modelling · Sensitivity analysis
